atiregion6

Clay pots are usually more attractive than plastic ones, but dry out fast and must be watered two times a day.

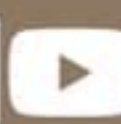

Use **hanging baskets** for plants to make a good medium to utilize space. Place it in location where they will receive maximum sunlight and good ventilation.

Do not use soil from the garden for hanging basket. It is **too heavy**, can become **waterlogged**, and **brings disease and insects** with it. Choose instead a soilless mix (quick-draining and lightweight) or use compost, alone or combined with a soilless mix.

To keep vegetable plants growing, feed them organic soil amendments, like **liquid seaweed, fish emulsion, or manure tea**, weekly. To ensure growth, vegetables need consistently moist soil.
